

Sachin Pawar

Pune, Maharashtra, India | sachin.pawar.eleven@gmail.com | linkedin.com/in/sachin-pawar-155a77153

PROFESSIONAL SUMMARY

Results-driven Lead Full Stack Developer and Hands-on Solution Architect with 11+ years of experience designing scalable, high-availability web applications. Expert in React.js, Node.js, and AWS cloud infrastructure. Proven track record of driving technical governance, executing complex SPIKE analyses, and leading agile engineering teams through end-to-end delivery. Passionate about mentoring talent, enforcing strict security standards, and leveraging GenAI tooling to boost developer velocity.

CORE COMPETENCIES

- **Languages & Frameworks:** JavaScript, TypeScript, Node.js, React.js, Express.js, Java, Jest
- **Cloud & DevOps:** AWS (S3, SQS, SES, Lambda, Serverless, DynamoDB), Docker, Jenkins, Git, CI/CD
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, Sequelize.js
- **Architecture & Security:** System Design, Microservices, Event-driven architecture, Scalability (horizontal scaling, load balancing), Caching strategies (Redis, CDN), Observability (logs, metrics, tracing), REST API Design, JWT, OAuth2, OWASP, SSO, RBAC
- **Leadership & Tools:** Owned end-to-end systems, Agile Delivery, Technical Governance, PR Reviews, GenAI Tooling (GitHub Copilot, Claude)

AWARDS

- **Impact Award** – CitiusTech (Leadership & Ownership) - 2025
- **EPMMY Award** - Client recognition (Successful Module Delivery) - 2025
- **Customer Delight Award** – Capgemini (ER&D Excellence) - 2022
- **Extra Mile Award** - Client recognition - 2020
- **One-Day Project Achiever** – Seed Infotech – 2017

KEY ACHIEVEMENTS

- Designed and evolved **scalable microservices-based architectures**, including migration from monolithic systems
- Architected and delivered a self-enrolment module, translating PRDs into production-ready solutions
- Implemented **secure authentication and authorization systems (RBAC, OAuth2, JWT)** following industry best practices
- Optimized database performance, **reducing query load by ~30%** and improving overall system efficiency
- Built and deployed **cloud-native, high-availability applications on AWS** (S3, SQS, SES, Lambda, DynamoDB)
- Led and mentored full-stack teams, driving **architecture decisions, coding standards, and improving sprint delivery predictability and reducing spillovers**.
- Automated 80% of the SDLC by orchestrating AI agents (Spec Generator, Spec-to-Stories) to autonomously translate raw requirements into structured SDDs and build-ready Jira stories.
- Achieved near-100% automation for routine execution by utilizing a Story Implementor agent to handle end-to-end coding, validation, and PR creation.
- Eliminated manual security and debugging overhead by deploying a Vulnerability Remediation agent to automatically patch PR package vulnerabilities, and a CloudWatch Log Analysis tool to instantly retrieve and correlate AWS logs without manual console navigation.

PROFESSIONAL EXPERIENCE

Sr. Lead Engineer I (Lead Full Stack Developer & Solution Architect) | CitiusTech Healthcare Technology, Pune / Nov 2022 – Present

Projects: Healthcare platforms, enterprise learning, and medical device integration accelerators

- **Technical Governance & Architecture:** Drove the product-to-engineering pipeline by translating Product Requirements Documents (PRDs) into actionable technical roadmaps. Evaluated architectural approaches & led architecture decisions, authored detailed SPIKE documents including database restructuring, and broke down complex epics into refined sprint stories.
- **Team Leadership:** Led a team of 10+ full-stack developers, facilitating task distribution, leading sprint refinements, and ensuring predictable delivery milestones.
- **Cloud Infrastructure:** Architected high-availability, cloud-ready solutions utilizing AWS (S3, SES, SQS, Lambda). Managed fully automated CI/CD pipelines and deployments using Docker and Jenkins.
- **Engineering Standards:** Enforced strict architectural integrity through rigorous PR reviews. Established coding best practices focusing heavily on OWASP security guidelines and ADA compliance (WCAG).
- **Developer Productivity:** Spearheaded the integration of GenAI tools (GitHub Copilot, Claude) into the daily workflow, significantly boosting team velocity and estimation accuracy.
- **Claude Agent & Skills**
 - **Story Implementor:** Leveraged an autonomous coding agent to accelerate Jira story implementation from analysis through coding, testing, and PR creation, while maintaining engineering guardrails such as regression coverage, duplicate PR prevention, and validation checks.
 - **Vulnerability Remediation:** Used an AI-driven PR workflow to identify and remediate dependency vulnerabilities across severity levels, automate branch-level fixes, and validate changes through build, lint, and test execution, reducing manual vulnerability remediation effort.
 - **CloudWatch Log Analysis:** Used an AI-assisted log investigation workflow to analyze AWS Lambda/ECS logs, correlate production and non-production issues with Jira defects, and accelerate root-cause analysis and troubleshooting.
 - **Spec-to-Stories:** Automated the conversion of requirements and design specifications into structured, build-ready Jira stories with clear acceptance criteria, API contracts, and database requirements, improving story quality and reducing manual refinement effort.
 - **Spec Generator:** Leveraged AI to transform PRDs, Jira items, documentation, designs, and rough requirements into structured SDD Intent Specifications, helping standardize requirement analysis, identify gaps and blockers, and accelerate technical planning through a human-reviewed workflow.
 - **Overall Impact:** Applied Claude-based AI agents and skills to automate and streamline software development activities across requirement analysis, story creation, implementation, security remediation, troubleshooting, and validation, improving developer productivity and reducing repetitive manual effort.

Tech Stack: JavaScript, React.js, Electron.js, Node.js, Express.js, Sequelize.js, PostgreSQL, MariaDB, Redis, JWT, OAuth2, AWS, Docker, Jenkins, GitHub Copilot, Claude AI.

Senior Software Engineer | Capgemini Pvt Ltd, Mumbai / Sept 2021 – Nov 2022

Projects: Industrial enterprise software

- Developed highly scalable backend services and asynchronous REST APIs using Node.js, MySQL, and PostgreSQL, supporting robust frontend integrations (React.js/Angular).
- Engineered core security and operational functionalities including complex RBAC, secure authentication workflows, and automated Cron jobs for background processing.
- Participated heavily in system architecture discussions, requirement estimations, and peer code reviews to ensure scalability across product features.
- Maintained high system stability and code coverage through comprehensive unit testing and streamlined deployment strategies utilizing Prometheus and Grafana for monitoring.

Tech Stack: JavaScript, Node.js, MySQL, PostgreSQL, MongoDB, React JS, Angular, Prometheus, Grafana

Senior Software Developer / Team Lead | Tridat Technologies Pvt. Ltd., Mumbai / *Sept 2019 – Sept 2021*

Projects: Transportation system and desk-booking platform

- Led backend architecture and managed a team of developers to deliver transportation and desk-booking platforms utilizing Node.js and Go.
- Architected and deployed secure, high-performance APIs featuring SSO integration, data encryption, and real-time ETA optimization algorithms.
- Designed highly reusable core modules (universal logging, Excel import/export) to accelerate feature development across multiple project squads.
- Deployed containerized applications using Docker and integrated highly scalable AWS services, maintaining strict code quality via Chai and Mocha unit testing.

Tech Stack: JavaScript, Node.js, Go, Angular, Express.js, Chai, Mocha, Git, MySQL, PostgreSQL, MongoDB, AWS, Docker

Senior Backend Developer | Vaisansar Technologies Pvt. Ltd., Mumbai / *June 2017 – Sept 2019*

Projects: E-commerce, ERP, and inventory platforms

- Engineered core modular backend architectures for large-scale ERP, inventory, and e-commerce platforms utilizing Java and Node.js.
- Built resilient RESTful APIs, scheduled background cron jobs, and implemented global error handling and role-based access controls.
- Played a key role in requirement analysis, technical estimations, and transitioning monolithic modules into scalable architectures.

Freelance Developer & Software Faculty | Keerti Computer Institute & Freelancing, Mumbai / *June 2015 – May 2017*

- **Freelance:** Developed end-to-end desktop applications (Medical Management, Ticketing systems) bridging user interface design with robust relational database integrations (C#, Java Swing, SQL Server).
- **Faculty:** Mentored students and delivered technical training across full-stack paradigms (Java Spring/Hibernate, .NET, HTML/CSS/JS, SQL), refining course modules to align with modern industry standards.

EDUCATION

- **M.Sc. IT** – KES Shroff College, Mumbai University
- **BCA** – Keerti Computer Institute of Information Technology, YCMOU University
